

This image showcases the **underlying data analysis performed using Excel Pivot Tables**, forming the foundation of the dashboard. It organizes raw data into meaningful summaries across multiple dimensions:

- **Monthly Revenue Breakdown** (April–June) with a total of ₹1,38,023
- **Product-wise Revenue Analysis** identifying top-performing items
- **Category-wise Revenue Distribution** with *Soft Toys* contributing the highest share
- **Time-based Revenue Analysis** showing order distribution across different hours of the day
- **City-wise Order Count** highlighting demand spread across locations
- **Average Metrics** such as delivery time (5.53 days) and average revenue per order (₹3,520.98)
